

Rocky Alazazi — Trinity Health Oakland Hospital

Internal Use Only | 30-Minute Meeting Structure | Pilot Conversation

0–2 min Open — Set the Frame

Goal: establish credibility + peer tone

Thank Rocky for his time. One sentence on who you are — lead with domain credibility, not the product:

"I spent 16 years in the elevator industry — five of those running my own consulting practice — and I built ElevatorIQ specifically because I kept seeing facilities teams overpaying for maintenance they couldn't verify."

Frame the meeting:

"I want to understand your situation first, then show you what we built, and see if it makes sense for your portfolio. This isn't a sales meeting — it's a conversation."

NOTE ON ROCKY

He's a CHFM, LEED AP, BCxP — treat him as a peer, not a prospect. He's also done vendor-side FM at Crothall, so he already knows how service contractors think. Skip the basics. Get to the substance fast.

2–12 min Discovery — The Most Important Part

Listen more than you talk. Take notes.

Ask these five questions. Let him answer fully before moving on. The information you gather here shapes everything that follows.

QUESTION 1 — CONTRACT HISTORY

"How long have you been with the Otis contract here, and when did you last go out to bid on maintenance?"

Listen for: *How long they've been locked in, whether they've ever tested the market, how much leverage they believe they have. If they haven't bid in 5+ years, that's a strong signal that they have no benchmark to compare against — and almost certainly don't know what competitive pricing looks like today.*

QUESTION 2 — INVOICE REVIEW PROCESS

"When you get an Otis invoice, what's your process for reviewing it — do you have a way to verify what's being billed versus what's actually covered under the contract?"

Listen for: *The core pain point. Most FDs will admit — at some level — that they don't have a system for this. If Rocky says "we just approve it," that's your opening. If he says he does review it, ask what that looks like — you'll find the gaps in the process quickly.*

QUESTION 3 — CONTRACT STRUCTURE ACROSS THE FLEET

"With a mixed-vintage fleet across the campus, are all 30 units on the same contract structure, or do you have different tiers by equipment age or type?"

Listen for: *Over-contracting. If all 30 units are on the same full-maintenance tier regardless of age, use, or duty cycle, that's significant opportunity. Older hydraulic units in the MOB or back-of-house likely don't need full-maintenance coverage at hospital rates.*

QUESTION 4 — SURPRISE CHARGES

"Have you had any surprise repair bills or callback charges that felt out of scope? How did you handle those?"

Listen for: *A specific story. If yes — that's your demo use case. That's exactly what Module A surfaces. Bonus context: with the \$48M ED expansion underway, construction-related callback charges are almost certain to show up. If they already have, that's your lead finding before you even run the analysis.*

QUESTION 5 — MODERNIZATION HORIZON

"What does modernization look like for this portfolio — do you have units approaching end of useful life, and how are you evaluating those decisions?"

Listen for: *Opens the Module B conversation (single modernization or multi-bid comparison). Also tells you whether this is a short-term contract management conversation or a longer-term capital planning relationship. Hospital elevators typically have a 25–30 year useful life; a mixed-vintage fleet*

12–20 min

ElevatorIQ Overview

Brief. Show the report. Let it speak.

Brief, clear explanation — don't over-explain the tech:

"Upload your invoices as PDFs. ElevatorIQ analyzes them against our Rulebook — 15 years of industry knowledge codified — and returns a structured analysis report in 48 hours, delivered directly to your email."

Show the sample report. Point directly to two sections:

- **Risk Signals section** — HIGH/MEDIUM flagged findings with specific recommendations. This is what Rocky actually needs: documented, defensible findings he can take to Otis or to his leadership team.
- **Executive Summary** — The section a FD reads first. Written to be actionable, not academic.

"This is what an independent elevator consultant would produce manually. We deliver it in 48 hours."

CONSTRUCTION PERIOD ANGLE — USE THIS IF IT FITS

If Discovery surfaced concerns about the ED expansion: *"With active construction on the campus, this is exactly the window where you want an independent baseline on your invoices — before Otis starts billing construction-related callbacks as out-of-scope repairs. Once that pattern establishes, it's much harder to dispute."*

20–25 min

Pilot Ask

Keep it simple. Nothing to sign today if he's not ready.

"Here's what I'd like to propose — and I want to be clear there's nothing to buy here, and no vendor contact involved."

Walk through the Scope Agreement. The three asks:

- Send us 3–6 months of Otis invoices — PDF, email is fine
- We run the analysis, you have a report within 48 hours
- 30-minute call to debrief on the findings

"If the findings are useful — and based on what you've described, I think they will be — we talk about what ongoing looks like. But that conversation only happens if you want it to."

25–30 min

Close & Next Steps

Leave with a clear action item, not "I'll follow up."

Confirm next steps before leaving the room:

- Rocky provides invoices — confirm preferred method: email attachment or secure upload link
- Set a date for the debrief call: suggest scheduling it for 72 hours after you confirm receipt of his invoices
- Leave the Value Brief and a copy of the Pilot Scope Agreement

LEAVE BEHIND

- ✓ ElevatorIQ Value Brief (1 page)
- ✓ Pilot Scope Agreement (1 copy for Rocky, 1 for you)
- ✓ Your contact: trey@elevatoriq.ai / your cell

If It Comes Up

Objection Handling

If he asks about future cost / pricing:

"We're still finalizing our pricing model. For the pilot, everything is complimentary. If the findings are strong, we'll have that conversation — and your feedback from the pilot will help shape what we build. I'm not going to throw a number at you today."

If he asks how you got his name:

"Through the Brinker network — I'm also working on the Brinker Supply side of things and someone made the connection. Grateful for it." (Keep it brief, move on.)

If he says Otis's invoices are fine / no issues:

"That's a good position to be in. The pilot would just confirm it — and you'd have a documented, independent baseline on your spend going into the next contract negotiation. Either way, you come out ahead."

If he's concerned about confidentiality / Otis finding out:

"Your documents and findings stay strictly confidential — never shared with Otis or any vendor, period. We have no vendor relationships. That's foundational to what we're building."

If he needs to loop in procurement or legal:

"Totally reasonable. The agreement is one page, no cost, no obligation — I intentionally kept it simple. Happy to provide whatever context you need for that conversation."
