

PRE-MEETING RESEARCH BRIEF

Trinity Health Oakland Hospital

Pilot Account Intelligence

Prepared for: Trey Zackery | Meeting Contact: Rocky Alazazi, Facilities Director | February 2026

✓ INTERNAL USE ONLY

✓ CONFIDENTIAL

✓ PRE-MEETING PREP

1 — HOSPITAL PROFILE

Trinity Health Oakland is one of Oakland County's flagship medical institutions — and a campus currently in the middle of its largest capital expansion in years.

Facility Snapshot

Item	Detail
Legal Name	Trinity Health Oakland Hospital
Former Name	St. Joseph Mercy Oakland
Address	44405 Woodward Avenue, Pontiac, MI 48341
Bed Count	497 licensed beds
Designation	Level II Trauma Center & Community Teaching Hospital
Elevator Portfolio	30 elevators — mixed makes and vintages
Current Service Provider	Otis Elevator Company (full campus)
Campus Layout	Multi-tower: Surgical Pavilion, South Patient Tower (204 private rooms), Medical Office Building, ancillary buildings. Minimum 8 floors confirmed.
Elevator Bank System	Named bank layout — "D elevators" confirmed in Select Specialty Hospital (Floors 7–8) wayfinding, indicating A–D or similar multi-bank system across towers

Active Capital Project — \$48 Million Emergency Department Expansion

🔑

KEY CONTEXT — USE THIS IN THE MEETING

Trinity Health Oakland broke ground on a **\$48 million, four-phase Emergency Department expansion** in summer 2024. Phase 1 completed July 28, 2025. The full project doubles the ED to approximately 50,000 sq ft and is on pace to complete in 2027. Includes additional trauma bays, a dedicated pediatric treatment area, and upgraded nursing stations.

Why it matters for the meeting: Rocky is managing a major active construction project while overseeing day-to-day operations for 30 elevators. Active construction shifts elevator duty cycles on key banks — more traffic, more wear, more opportunities for Otis to bill callbacks as "out-of-scope." Without an independent baseline, Rocky has limited leverage to dispute those charges. That's the ElevatorIQ value prop in one sentence.

Trinity Health System Context — The Scale Opportunity

Trinity Health is a national multi-institutional Catholic health care delivery system. Trinity Health Michigan encompasses multiple hospital campuses — including Trinity Health Ann Arbor, Trinity Health Livingston, Mercy Health Saint Mary's (Grand Rapids), and others.

🔑 SCALE OPPORTUNITY

A successful Oakland pilot, with documented findings, gives Rocky a referenceable win he can carry to system-level conversations at Trinity Health Michigan. One FD champion with a real result is the most credible path to multi-campus expansion. The question to explore in the meeting: does Rocky have a peer network across Trinity Health Michigan facilities directors?

Joint Commission & Compliance

Trinity Health Oakland holds Joint Commission accreditation. The Joint Commission's Environment of Care standard EC.02.06.01 covers maintenance of equipment — including elevators. In an active construction environment, elevator compliance documentation becomes more complex and higher risk. No public elevator-specific compliance findings were identified.

Michigan LARA elevator inspection records for this campus are not publicly indexed online. Specific inspection history requires direct LARA inquiry or FOIA.

2 — ROCKY ALAZAZI — CONTACT INTELLIGENCE

Rocky is a credentialed, well-networked healthcare facilities professional who understands how service contractors think — including how they bill.

Profile Summary

Item	Detail
Current Title	Director, Facilities — Trinity Health Oakland
Tenure at Trinity Health	2023–present (~2 years)
Credentials	LEED AP — Leadership in Energy & Environmental Design Accredited Professional BCxP — Building Commissioning Professional CHFM — Certified Healthcare Facility Manager

Career History

Role	Organization	What It Tells You
Director, Facilities & Engineering	Crothall Healthcare	Crothall is a large outsourced FM provider for hospitals. Rocky has seen vendor-managed FM from the inside — he knows how contractors bill and where the gaps are.
Vice President	Quicken Loans / Bedrock Detroit	Senior leadership over a major commercial real estate portfolio. Comfortable with executive conversations and complex, multi-asset facilities.
Site Director	Beaumont Health	Direct healthcare facilities experience at one of Michigan's largest health systems.

Professional Community

- **MiSHE (Michigan Society for Healthcare Engineering):** Active member and event organizer — organized networking events, publicly recognized during Healthcare Facilities Week for "commitment to excellence"
- **ASHE (American Society for Healthcare Engineering):** Attended ASHE Annual 2023; MiSHE won recognition that year

How to Read Rocky Going In

MEETING INTELLIGENCE

- **He's technically credentialed — treat him as a peer.** LEED AP + BCxP + CHFM means he understands building systems deeply. Don't over-explain basics. Lead with findings, not process.
- **He's done vendor-side FM.** Crothall experience means he already knows how service contractors bill. He probably suspects overcharging — he just doesn't have proof. ElevatorIQ gives him the proof.
- **Uptime is his brand.** He was publicly recognized for keeping facilities running "safely, efficiently, and without interruption." Frame ElevatorIQ around protecting uptime and his ability to hold vendors accountable during construction.
- **He's a connector.** He organized the MiSHE event. If he believes in something, he tells his network. A good pilot result travels.
- **Rapport entry:** MiSHE and ASHE. If you know anyone in that circuit, mention it early. Healthcare FM is a small world.

3 — OTIS CONTRACT INTELLIGENCE

A 30-elevator hospital campus on full-service Otis represents \$300,000–\$540,000+ in annual maintenance spend — with well-documented overcharge patterns.

Estimated Annual Spend — 30 Units

Scenario	Per Unit/Month	Monthly (30 units)	Annual
Conservative (older units, basic service)	\$800	\$24,000	\$288,000
Mid-range (mixed vintage, full-service hospital)	\$1,100	\$33,000	\$396,000
High (hospital-grade, newer proprietary equipment)	\$1,500+	\$45,000+	\$540,000+

Industry benchmarks based on published procurement data and hospital sector patterns. Trinity Health Oakland-specific rates are not public.

Where Hospital Accounts Get Overcharged

⚠ HIGH — CALLBACK LABOR BILLED OUTSIDE CONTRACT SCOPE

Full-maintenance contracts cover callbacks during normal hours. Otis commonly reclassifies callbacks as "out of scope" by citing operator error, vandalism, or "misuse" — often loosely defined. In a high-traffic hospital, this can represent \$10,000–\$30,000+ in annual overbilling.

⚠ HIGH — UNCAPPED ANNUAL ESCALATION

Otis contracts typically include 3–5% annual escalation, often tied to CPI or internal indices. Over 5–7 years without renegotiation, a contract at \$1,000/unit can compound to \$1,250–\$1,400/unit. Many hospital FDs don't track the baseline — they just pay the invoice.

⚠ HIGH — PROPRIETARY PARTS MARKUPS

Otis uses proprietary controllers on newer installs (Gen2, CompassPlus). Parts are billed at 40–80% above OEM cost. On a mixed-vintage fleet, older units may have non-proprietary components available at market rates — but owners are billed at proprietary pricing regardless.

⚠ HIGH — CONSTRUCTION PERIOD EXPOSURE (CONTEXT-SPECIFIC)

During the active \$48M ED expansion, construction traffic increases elevator duty cycles on key banks. Otis will bill wear-related callbacks and component replacements attributable to construction traffic as out-of-scope. Without a pre-construction baseline, there's no documented position to dispute those charges.

▲ MEDIUM — OVER-CONTRACTED UNITS

A mixed-vintage 30-unit fleet almost certainly includes elevators that don't need full-maintenance coverage. Older hydraulic units in lower-traffic service roles, MOB elevators, and back-of-house freight lifts may be adequately served by oil & grease or parts & labor contracts at 30–50% lower cost per unit.

4 — CAMPUS ELEVATOR COMPLEXITY

Estimated Fleet Composition — 30 Units

Type	Est. Count	Duty Cycle	Notes
Patient / Bed (stretcher-rated)	8–12	Very High	Primary clinical use; highest maintenance intensity; 5,000+ lb capacity; frequent callback activity
Visitor / Public Lobby Banks	6–10	High	Named banks (A–D); highest public visibility; subject to peak traffic patterns
Service / Freight	4–6	Medium-High	Materials, laundry, food service; often older vintage — strong candidates for contract tier review
Medical Office Building	2–4	Medium	Lower duty cycle relative to main towers; potentially over-contracted
Ancillary / Back-of-House	2–4	Low–Medium	May include parking structure units; most likely over-contracted

Named Bank System

The "D elevator bank" reference in Select Specialty Hospital directions is consistent with a large multi-tower campus that has formally named elevator banks across buildings or wings. In Otis accounts, named bank systems often appear as sub-schedules within a master contract — adding complexity to invoice verification since charges can be assigned to specific banks without clear scope documentation.

5 — RESEARCH GAPS

- **Rocky's full LinkedIn profile** — LinkedIn blocks automated access. Profile confirmed active via ZoomInfo and public references. Recommend checking manually before the meeting for any recent posts or announcements.
- **Michigan LARA elevator inspection records** — Not publicly indexed. Specific inspection history requires direct LARA inquiry or FOIA. Worth requesting post-pilot if findings warrant it.
- **Otis contract rates (Trinity Health Oakland-specific)** — Specific rates are not public. All figures above are industry benchmarks.
- **Trinity Health system-level facilities structure** — Whether maintenance contracts are negotiated at campus or system level was not confirmed. Ask Rocky directly: "Are elevator contracts managed here or at the system level?"
